Public Health management.

Mosquitoes - Pest Control - Bayer environmental
science

To control adult mosquitoes that enter the houses or
commercial premises, use of indoor residual sprays (IRS)
is done by spraying on the walls. Alternatively, space
sprays such as thermal fogging or ULV applications can
also be done to rapidly reduce adult mosquito populations
indoors or outdoors.

Mosquitoes - Bayer Vector Control

Female mosquitoes inject saliva into the bite site in order
to prevent coagulation of the blood during feeding. It is
through this process that pathogenic organisms such as
viruses and protozoa can be transmitted. After taking a
blood meal female mosquitoes must rest in order to digest
the blood and generate eggs.
