After the feeding is finished, add warm water to the feeding syringe and let it flow by gravity. If the water does not go through, try changing positions a bit or attach the plunger to the syringe, and gently push the plunger part-way. DO NOT press all the way down or press fast. Remove the syringe. Close the NG tube cap.

[Feeding tube - Wikipedia](#)

A nasogastric feeding tube or NG-tube is passed through the nares (nostril), down the esophagus and into the

stomach. This type of feeding tube is [Nasogastric \(NG\) Tube Overview - verywellhealth.com](https://www.verywellhealth.com/nasogastric-ng-tube-overview/). While most NG tubes are placed without any incident, there are some risks. One of the things that can happen while the tube is being inserted is an injury to the esophagus, throat, sinuses, or stomach. It's possible that if an NG tube gets blocked or torn, or if it comes out of place, there can be further problems.
