AN OVERVIEW OF ROGOWSKI COIL CURRENT SENSING TECHNOLOGY

1 ABSTRACT The following pages present a brief overview of Rogowski coil current sensing technology. The intent of this document is to allow the reader to develop a basic understanding of the versatile Rogowski coil technology.

[Rogowski coil - Wikipedia](#)

A Rogowski coil is a toroid of wire used to measure an alternating current $I(t)$ through a cable encircled by the toroid. The picture shows a Rogowski coil encircling a current-carrying cable. The output of the coil, $v(t)$, is connected to a lossy integrator circuit to obtain a voltage V out (t) that is proportional to $I(t)$.

Simple to retro-fit, the clip-around Rogowski coil sensor is thin, lightweight, flexible and robust. Coil size is not dependant on the magnitude of the current to be measured. Coils small enough to fit between the legs of a TO-220 semi-conductor; 20m coils to fit round a wind-turbine.

[Rogowski Current Sensors](#) Rogowski coils are used for measuring AC or high speed current pulses. It consists of a helical coil of copper wire which is wrapped around the conductor whose current is to be measured.

[High Performance Rogowski Current Transducers - GMW](#)

Rogowski transducers have the following features: Very high bandwidth enabling for example the measurement of switching transients in semiconductors Capability of measuring large currents. The same size coil can be used for measuring 100A or 100kA whereas other current transducers increase in size for increasing current magnitude.
