2. Closed-loop Types of Sun Tracking Systems. Closed-loop types of sun tracking systems are based on feedback control principles. In these systems, a number of inputs are transferred to a controller from sensors which detect relevant parameters induced by the sun, manipulated in the controller and then yield outputs (i.e. sensor-based).

Advantages and disadvantages of a sun tracker system I have to present a final year project in my college and the time duration for that is 6 months. I am planning on making a prototype for sun tracking solar panel (single axis using maximum voltage method). But many students argue that tracking sun isn't beneficial as it increases the cost by adding stepper motor, sensors, control systems.
