 Surface roughness - Wikipedia
 Surface roughness often shortened to roughness, is a
 component of surface texture. It is quantified by the
 deviations in the direction of the normal vector of a real

surface from its ideal form. If these deviations are large, the surface is rough; if they are small, the surface is smooth.

RMS vs Ra - Finishing

A. RMS and Ra are based on different methods of calculating the roughness. Both are done with a profilometer, but the profilometer calculates the roughness differently for Ra and RMS. Ra is the arithmetic average of surface heights measured across a surface. Simply average the height across the microscopic peaks and valleys.
